

Friday, January 28, 2022

Dear Valued Partner,

We feel another update is in order to inform you of our current situation and the progress we have made the last 3 weeks. We are down to just a handful of our employees testing positive with the OMICRON Variant that are not available to work at the Monroe facility. Most of those previously affected have recovered and are healthy once again coming back to work.

This week our Marketing and IT departments were hardest hit with 80% of the teams down sick. Our Installation office is almost back to full strength, but unfortunately 20% of our installation teams have come back positive for COVID these last couple of days.

The good news is that as of today most of our production department's workers have recovered and after the mandatory quarantine have returned to work. The one exception is the roller shade department is still one week or so from returning to full speed.

Like all of you, we are paying attention to the news and feel optimistic that soon we will not be dealing with complications due to the pandemic.

As our custom has been during the pandemic we are working diligently with The Snohomish Health Department. They have been closely guiding us to ensure the safety of our staff to the fullest extent.

Your continued patience and understanding is very much appreciated and thanks for your positive comments and well wishes.
